

Music Manager Instance

Inherits from: PersistentSingleton / Version 1.0.0

Description

The Music Manager Instance allows you to **easier manage audio files in Unity**. These audio files are in Asset Bundles, which allows you access them directly.

In order to use the script, you need a game object in your scene with the Music Manager script attached to it. The object will enter the *don't destroy on load* section so it can be used in multiple scenes.

Properties

MusicManager.Instance.isMusicFading	Whether the audio is changing gradually its volume (Read only).
MusicManager.Instance.MusicLoop	Whether the current music is set to loop or not.
MusicManager.Instance.SFXLoop	Whether the current SFX is set to loop or not.
MusicManager.Instance.MusicVolume	Music volume level. (Range form 0 to 1)

MusicManager.Instance.MusicVolumeSave	Music volume level, but after changing the value, it will be saved in the <u>playerprefs</u> (Range form 0 to 1)
MusicManager.Instance.SFXVolume	Volume level of the SFX. (Range form 0 to 1)
MusicManager.Instance.SFXVolumeSafe	Volume level of the SFX, but after changing the value, it will be saved in the <u>playerprefs</u> (Range form 0 to 1)
MusicManager.Instance.MusicQueueCount	Number of audio clips in the queue. (Read only)
MusicManager.Instance.GetMusicTimeLeft	Time left of the audio clip playing at the moment. (Read only)
Public Methods	
MusicManager.Instance.PlayMusic();	Plays music if there is any in the queue.
MusicManager.Instance.PlayMusic(string audioName);	Plays a song by name.
MusicManager.Instance.PlaySound(string audioName);	Plays a VFX by name.
MusicManager.Instance.StopMusic();	Stops the current song playing.
MusicManager.Instance.PauseMusic();	Pauses the current song playing.

MusicManager.Instace.FadeInSong(float time);	Increases the volume gradually from 1 to 0 in the indicated time.
MusicManager.Instace.AddSongToQueue(song audioName);	Adds a song to the queue to be played after the current song ends playing.
MusicManager.Instace.RemoveSongFromQueue(song audioName);	Removes a song from the queue .
MusicManager.Instace.PlayNextSong();	Plays the next song in the queue.

Constants

Access all the track name strings by addressing the **SS_Medieval_Music** class. For example:

```
MusicManager.Instace.PlayMusic(SS_Medieval_Music.ARedeemerShallArise_Complete);
```
